

Press Release

CENTURION Computer for Trilateral MLRS Upgrade-Program

ATM`s latest PC- based computer system CENTURION was chosen for the development program of the European Fire Control system (EFCS).

The contract includes additionally TFT - displays MDU15-TDS with touch and militarised keyboards. In order to handle the different national radio protocols, the computer is equipped with the ATM Standard communication processor KMP.

First shipments of the hardware will take place end of the year 2003.

The CENTURION computer is especially designed for multipurpose use in armoured vehicles. Due to the different input/output data lines e.g. CAN BUS, the processor power and memory capacity, the CENTURION offers a diverse application range in modern armoured vehicles.

Until today the CENTURION was chosen in two other programs this year.
