

## Press Release

### INTELLIGENT DISPLAYS FOR ARTILLERY APPLICATIONS

Modern artillery systems need more and more computer-performance and an intelligent man machine interface support. An important part for the artillery modernisation is the integration of navigation platforms for quick and easy presentation of the gun position.

ATM was recently awarded by Honeywell Regelsysteme GmbH Maintal/Germany with an additional contract for the Panel-PC DEA 6.

The DEA 6 is a part of the Honeywell Tactical Land Inertial Navigator Talin.

The DEA 6 will be directly integrated at the towed guns and other applications in the Finnish Artillery. The DEA 6 is available with a 6.4" EL-or TFT- display. Various interfaces like CAN- Bus, Ethernet and RS232/ RS422 can be supported. The software is Window oriented.

Besides this contract the DEA6 is fielded in the German Artillery Program COBRA
